

Creating

A Beautiful New World

October 23,2020

Anastasia Levitskaya

Taganrog Institute of Management and Economics

Taganrog, Russia

Dear Anastasia,

We thank you for the participation of your students in the Great Globe Project. One of our American students of 14yrs. was assigned one of the triangular tiles that included Taganrog (10k on a side). He has 3D printed that tile and carried out the other tasks to print the vinyl cover of the satellite Google Earth image. He was encouraged to “explore” the tile and ask questions and learn something about the tile A718258.

Your students did a great job and enlightened our student and the Great Globe team with their diverse answers showing a depth of knowledge of their city and the region. We have shared that report with numerous other students, parents, teachers and educators as an example of the kind of dialog we wish to engender among students across the globe.

Taganrog sounds like a place American students would wish to visit. We also asked you students what they would want to know about Arizona – our state. We look forward to sharing with them our view of Arizona – life, entertainment, work, climate and the myriad of questions you students posed.

Thank you again for your participation and that of your students. We would like to continue the dialog and engage more students across the globe to “explore” their planet.

Sincerely yours,

Keith Thompson

International Program Manager

The Great Globe Project

Scottsdale, Arizona
